

IGNITING INNOVATION

FEATURES AND BENEFITS

NON-SLIP & IMPACT ABSORBING

365 Rubber Surfacing is made from a soft, yet durable, rubber and urethane compound that is both impact resistant and naturally provides for a high level of impact absorption, thereby having the ability to keep family, friends and guests safer from the impact of an unintentional fall. Our line of surfacing systems have the highest COF (Coefficient of Friction) of any surfacing product, making it the most slip resistant surface on the market. Our surfacing literally stops most falls before they even happen. However, while no surface can 100% prevent every fall scenario, it can provide a safer, softer surface to land.

LOW HEAT TRANSFER

365 Rubber Surfacing is made of EPDM which is the same product used in 90% of all roofing membranes. Because EPDM is inherently a very poor conductor of heat, feet will feel less heat as compared to extreme heat conductors such as concrete or stone. Our surfacing will make your surface 15-20 degrees cooler in the summer months, keeping your feet burn-free even in the hottest of temperatures! Additionally, it expands and contracts up to 40% with the sub-surface to account for any shifting or cracking may occur during freeze/thaw cycles as well as during the natural settling process that occurs post-construction.

EASY TO REPAIR

365 Rubber Surfacing is made of tiny little granules of EPDM that fit together like puzzle pieces. In the event something does happen to the product, it is extremely easy to cut it out and blend a new patch like it was never there!

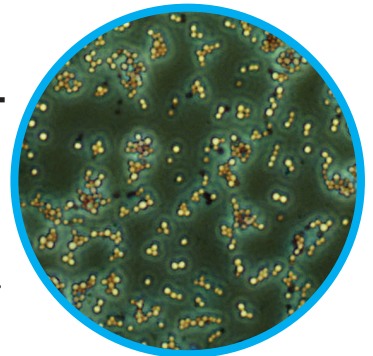

LONG LASTING PRODUCT & WARRANTY

365 Rubber Surfacing is built to last for decades. Its soft yet strong mixture allows it to stand the test of time with jobs lasting as long as 32 years. We have made continuous improvements to our products and installation techniques over the past 20 years, allowing us to warranty your job for up to a decade!

ANTIBACTERIAL & ANTIMICROBIAL

365 Rubber Surfacing is made of a closed cell polymer that is both water and airtight. Because neither water nor air can penetrate the granules, neither can bacteria or fungi. Organic substances are unable to cause damage or deterioration to your surface due to the closed cell property. Combined with its chemical stability there is hardly anything that can harm this product.

UV & CHEMICALLY STABLE

365 Rubber Surfacing has been tried and tested in some of the harshest UV saturated countries in the world for decades and still holds its color and composure. Many EPDM products have fillers in them that break down in high UV. Our rubbers and urethanes are made specifically to combat the harsh environments of high UV and chemical saturation. Some of our aquatic installations have maintained their integrity in water parks since they were installed over 30 years ago.

FEATURES AND BENEFITS

FAST, PROFESSIONAL INSTALLATION

Our team of experts have decades of combined experience installing 365 Rubber Surfacing non-slip decorative surfacing. Whether it's a brand-new pool deck, damaged patio, rough driveway, or even a flagstone path, we can install it with a minimum of fuss! Most jobs take only one day to complete, meaning you can enjoy your installation that much sooner!

FIXES OLD CRACKED, BROKEN, OR UNEVEN SURFACES

365 Rubber Surfacing is suitable for many aesthetic purposes, yet, the most practical and functional is its ability to level uneven surfaces. Gaps, expansion joints, heaves broken, rough or unlevelled surfaces can be concealed under a perfectly flat rubber surface. We can re-surface almost any solid surface, from concrete and asphalt to interlock or pavers. We can install it usually in one to two days and leave a beautifully smooth, flat surface that is hazard free. Ripping out and re-pouring concrete is tedious, expensive, loud and messy. Our surfacing is fast, quiet, clean and maintenance free.

EASY TO MAINTAIN

365 Rubber Surfacing is made from high-grade EPDM and extremely resilient resins, making it easy to maintain and capable of holding up under the toughest cleaners. Wash it off quickly with a power washer (up to 4000 PSI) and soap and water. For a longer-life, use our custom blended and warranty approved product line to guarantee that your installation looks and feels as good as the day it was installed!

NOISE REDUCING

Impact absorption and resistance is a fantastic quality to have, but so is noise dampening! 365 Rubber Surfacing is made of synthetic rubber granules therefore dispersing and deadening the reverberation of sound in an area. In large commercial areas, a quieter workplace is most times a calmer workplace and improves guest experience.

DECORATIVE COLOR OPTIONS

365 Rubber Surfacing comes in a variety of colors and only uses color-fast EPDM granules and UV resistant resins to ensure that you will be able to enjoy your surface for years to come without worry of fading. With the help of our design team, we can use our standard color palette or formulate custom blends to find the perfect match to your surroundings.

CUSTOM DESIGNS & LOGOS

We separate ourselves from the rest because of our beautiful custom design work. From logos to accents to floor patterns, our design team will draw up a personalized flooring project specifically to cater to your personality or brand. With every 365 Rubber Surfacing job you will see our creativity and outside the box thinking to bring your vision to life.

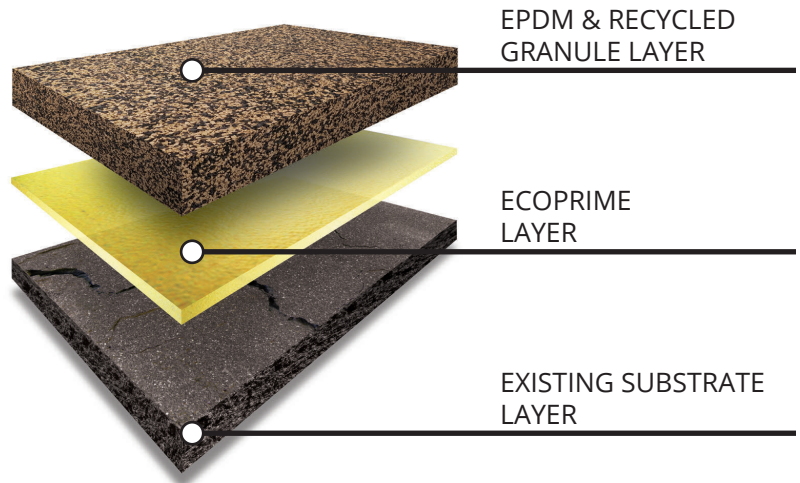

SYSTEM INFORMATION AND SPECIFICATIONS

ECOGRIP

by 365 Rubber Surfacing is a specialty coating system comprising high-grade, color-fast EPDM and recycled rubber mixed with our industrial strength EcoPrime urethane for use in driveway and pathway applications. Our proprietary EcoPrime can stand up to the toughest outdoor and off-road vehicles, and ensures that the product stands up to extremely harsh environments for years to come. The flexibility and strength of **ECOGRIP** will give you the peace of mind that unsightly cracks and discoloration of your surface will be a thing of the past. We

use a multitude of proprietary and ecologically safe, two-part chemicals sourced and developed from our decades of experience in the rubber surfacing business. All our materials are non-toxic and have zero ground leaching. Additionally, **ECOGRIP** uses recycled materials to keep waste out of landfills and repurposes rubber in an environmentally friendly fashion. **ECOGRIP** is the most comprehensive and flexible surfacing system for garages, driveways, and other surfaces requiring strength, toughness, and durability.

SYSTEM INFORMATION AND SPECIFICATIONS

At 365 Rubber Surfacing, we work very closely with our manufacturers. We ensure that all of our materials are made to the highest grade of specification. We are uncompromising in our efforts to deliver quality products to our clients - otherwise, they wouldn't last. The proof is in the longevity of our older products and how they are still here to this day. With the proper additives and chemicals, **ECOGRIP** should last an extremely long time. We expose the mixed products to 5x the normal wear and tear to see what works and what doesn't. Not all products are made equal, and we make sure to have the best.

BENEFITS OF ECOGRIP

RECYCLED PRODUCT

- **NON-SLIP & IMPACT ABSORBING**
- **HIGH DURABILITY & FLEXIBILITY**
- **UV & CHEMICALLY STABLE**
- **NOISE REDUCING**
- **EASY TO MAINTAIN & REPAIR**
- **FAST, PROFESSIONAL INSTALLATION**
- **RESURFACES DAMAGED, OLD, & CRACKED SURFACES**
